Course Objectives
This course is an introduction to Abstract Algebra. Through out this course we teach students about groups, subgroups, cyclic groups, permutation groups, homomorphisms and isomorphisms, direct product, cosets and Lagrange's theorem, normal subgroups, factor groups, first second and third isomorphism theorems.
Teaching and Learning Methods
1. Introducing new definitions and using examples to illustrate new concepts. 2. Proving theorems which constitute the core of the course. 3. Solving some examples and assigning homework's.

4. Discussing some of the students' solutions of some sample assignment.
5. Making a discussion of the problems of each exam.
