

# The Hashemite University Faculty of Engineering Civil Engineering Program Course Syllabus

	Introduction to Eartho	-	440404505	
Course Title:	Engineering	Course Number:	110401525	
Department:	Civil Engineering	Designation:	Elective	
Prerequisite(s):	110401422			
Instructor:	Dr. Hazim Dwairi	Instructor's Office	<b>e:</b> E 3009	
Instructor's e-mail:	hmdwairi@hu.edu.jo			
Office Hours:	Mon.; Wed. (13:00-14:00). At all times through Email & MS-Teams			
Time:	Mon.; Wed. (8:30-10:00) Classroom: E 2002			
Course description:	Effects of earthquakes on structures and design of structures to resist earthquake motions; earthquake mechanisms and ground motions; response of structures to earthquake motions; behavior of materials, structural elements and assemblages subjected to earthquakes; principles of earthquake-resistant design practice; soil-structure interaction; and special topics.			
Textbook(s):	1- Paulay, T. and Priestley, M.J.N. "Seismic Design of Reinforced Concrete and Masonry Buildings." John Wiley & Sons, Inc., 1992. 2- Armouti, N.S. "Earthquake Engineering – Theory and Implementation." Armouti, 2 <sup>nd</sup> Edition, 2006.			
Other required material:	Jordan Seismic Code, First Edition, Amman 2005.			
	Objective		ABET Student Outcome	
Course objectives:	Develop analytical models and conduct analysis of structures under the influence of seismic actions.		[1], [2], [7]	
	Develop an understanding for the effects that earthquakes have on structural systems		[1], [2]	
	<ol> <li>Develop an understanding of basic aspects critical for seismic design, assessment, and retrofit.</li> </ol>		[1], [2]	
	<ol><li>Apply the principals o selected building.</li></ol>	f seismic design to a	[1], [2], [5], [7]	
Topics covered:	<ol> <li>Introduction to earthquake engineering</li> <li>Introduction to earthquake seismology</li> <li>Dynamics of structures – linear analysis</li> <li>Dynamics of structures – nonlinear analysis</li> <li>Ductility and nonlinear behavior</li> <li>Design response spectra</li> <li>Method of analysis – Force based (equivalent lateral force)</li> <li>Beam, column, and joint design issues</li> </ol>			
Class/laboratory schedule:	2 class sessions each week; 75 minutes each			
Grading Plan:	Midterm Exam (30 Points) 17-04-2023 (class time) Project (30 Points) 15-05-2023 Final Exam (40 Points) Check registration dept.			

**General Notes:** 

### **The Hashemite University Faculty of Engineering Civil Engineering Program Course Syllabus**

Grade

#### **Grades Scale:**

Letter

## A+ 90 -100.00 A 86 - 89.99 A+

A-	82 – 85.99
B+	78 – 81.99
В	74 – 77.99
B-	70 – 73.99
$C^{+}$	66 _ 60 00

Letter	Grade
С	62 – 65.99
C-	58 – 61.99
D+	54 – 57.99
D	50 - 53.99
F	< 50

 No student is allowed to be absent for more than 4 lectures per semester.

#### **Student Outcomes**

ABET 1-7	<b>√</b>	Outcomes	Assessment Measures
1	<b>V</b>	an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.	Exams & Project
2	<b>√</b>	an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.	Exams & Project
5	<b>V</b>	an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives	Project
7	√	an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.	Project
