

# The Hashemite University Faculty of Allied Health Sciences Department of Medical Imaging Course Syllabus

Course information		
Course Title	Quality Control of Radiological Images	
Course Code	110508312	
Prerequisites	110508211	
Credit Hours	3 (2+3) hours	

### **Course Description**

This course introduces the student to the principles of radiographic techniques which producing the best diagnostic image quality. Therefore, Quality control is the use of diagnostictools to detect trends that will eventually cause repeated exposures to the patient, and correct them before such unnecessary exposures come about. By definition, then, QC plays a vital role in minimizing patient exposure.

# **Course Objectives**

By the end of this course, the student is expected to:

- 1. Describe the visibility and recognisability of radiographic quality
- 2. Identify contrast, gray scale and resolution
- 3. Give two reasons why mAs should beconsidered as the primary control forimage density
- 4. Define optimumkVp
- 5. Explain the difference between gridratio and grid radius
- 6. List the methods by which scatterradiation can be reduced or eliminated after it has been produced
- 7. Explain the most effective way for the individual radiographer to minimize patient exposure
- 8. Describe the effect of off-centering and beam divergence on radiographic quality.

Recommended Textbook		
Title	Fuchs's Radiographic Exposure and Quality Control	
Author	Quinn Carroll	
Publisher	Charles Thomas publisher, Ltd	
Year	2003	
Edition	7 <sup>th</sup> , Ed	
Book website		
Other References		
Title	An Analysis of Radiographic Quality	
Author	Daniel Donohue	
Publisher	Lippincott Williams and Wilkins	
Year	1995	
Edition	3 <sup>rd</sup> Ed	

Title	Essential of Diagnostic Imaging		
Author	Guebert,		
Publisher	Mosby, Inc		
Year	1995,		
Edition	1 <sup>st</sup> , Ed

Course Contents				
<u>Chapter</u>	QUALITY OF RADIOGRAPHIC IMAGE			
<u>1:</u>	<ul> <li>Quality Assurance QA and Quality Control QC</li> <li>Objectives of QA Brazzara</li> </ul>			
	<ul> <li>Objectives of QA Program</li> <li>Visibility</li> </ul>			
	<ul><li>Visibility</li><li>Recognizability</li></ul>			
	<ul> <li>Qualities of the radiographic</li> </ul>			
	- Quanties of the radiographic			
<u>Chapter</u>	X-RAY TUBE/VISIBILITY FACTORS			
<u>2:</u>	Milliambere-second (mAs)			
	<ul> <li>Control of Density</li> </ul>			
	Effect on Contrast			
	<ul> <li>Exposure Time and Motion</li> </ul>			
	❖ Kilo-voltage-Peak kVp			
	Control of contrast			
	Control of Density			
	Exposure latitude			
	❖ Machine Phase and Rectification			
	<ul> <li>X-ray quality and quantity</li> </ul>			
	Effect on Density			
	Effect on Contrast			
	❖ Beam Filtration			
X-ray quality and quantity				
Compensating Filtration				
	❖ Filed Size Limitation			
	Effect on Density			
	Effect on Contrast			
	Elifect on Contrast			
<u>Chapter</u>	X-RAY INTERACTION/ VISIBILITY FACTORS			
3:	Effect of Scatter radiation on Density and Contrast			
<u> </u>	Fog versus Blur			
	Scatter and Radiation Exposure			
	Effect of Grid on Contrast			
	2 Lifett of Ond off Contrast			

Grid Efficiency Grid Cut-off

Intensifying Screen

# <u>Chapter</u> GEOMETRICAL FACTORS

<u>**4**:</u> ● Focal spot size

The anode bevel

Source image receptor distanceObject-image receptor distance

Distance ratio

• Geometric function of positioning

# <u>Chapter</u>

# **EXPOSURE CONTROL**

<u>5:</u>

- Milliampere-seconds (mAs)
- Kilovoltage-Peak (kVp)
- Filtration
- Field size limit
- Grids and Cassettes
- Distance

Assessment		
First Exam	20	
Second Exam	20	
Final Exam	20	
Lab + In course assessment	40
