Syllabus: Respiratory System (111501205) Second Year- Second Semester, 2022/2023

COURSE INFORMATION	
Course Name: Respiratory System Semester: Second semester, Second year Department: Department of Microbiology, Pathology, and forensic Medicine Faculty: Faculty of Medicine	Course Code: 111501205 Section: Preclinical Module Core Curriculum: MD program
Day(s) and Time(s): Sunday-Thursday, 9:30 am-2:00 pm. (Teaching Period: March 26, 2023 – May 2, 2023) Classroom: Theoretical lectures: AL Harith auditorium Practical Labs: Labs of anatomy, physiology, pathology, and microbiology, Ibn Sina Complex	Credit Hours: 5 Prerequisites: None
COURSE DESCRIPTION	
<p>The respiratory module is a five-credit hour course with around 50 lectures and eight practical labs included. This course integrates all basic science disciplines in one system-based course to discuss respiratory system-related topics. Each basic science department is incorporated into an integrated body of knowledge covering anatomy, physiology, pharmacology, pathology, biochemistry, and microbiology. The goals of this course will be achieved via lectures and relevant laboratory practical sessions. More specifically, respiratory system (RS)-related topics will be covered at first to provide basic knowledge and understanding of the structure, the function of the respiratory system, the biochemical basis of its function, as well as the pathological basis of respiratory disorders in the lungs and airways. During the course and whenever relevant, the students are exposed to clinical problems and cases to emphasize the explanations of symptoms, signs, investigations, and forms of treatments. Practical sessions are mostly planned to be as stations to allow students to expose their knowledge for discussion and confirm concepts learned in lectures. Research ideas are also included to emphasize social responsibility, evidence-based medicine, and innovative thinking.</p>	

DELIVERY METHODS

The course will be delivered through a combination of active learning strategies. These will include:

- PowerPoint lectures and active classroom-based discussion.
- Live Online delivered lectures.
- Relevant papers and reading documentaries.
- E-learning resources: e-reading assignments and practice quizzes through Microsoft Teams.
- Practical laboratory sessions.

COURSE COORDINATOR INFORMATION (Pathology lecturer)

Name	Ola Abed Allah Abu Al Karsaneh
Academic Title:	Assistant Professor
Office Location:	Faculty of Medicine, Ibn Sina Medical Faculties Complex Department of Microbiology, Pathology, and Forensic Medicine First floor, Office number 1017
Telephone Number:	+962 (05) 390 3333 (5577)
Email Address:	olaa@hu.edu.jo olaa@staff.hu.edu.jo
Office Hours:	Sunday: 10:00-12:00 Tuesday: 10:00-12:00 Please send an e-mail to: olaa@hu.edu.jo or a message to olaa@staff.hu.edu.jo to meet at any other time or to ask questions.

• OTHER INSTRUCTORS:

<u>Anatomy Lecturer:</u> Name: Academic Title: Office Location: Telephone Number: Email Address: Team Contact Office Hours:	Mohamed Fathi Mohamed Elrefai Assistant Professor of Human Anatomy and Embryology 3 rd floor, Room 3018 05390333 Ext 5604 mohamed@hu.edu.jo mohamaed@staff.hu.edu.jo Sunday (11 am-1 pm) Tuesday (11 am-1 pm) And all students are welcome at any time
Name: Academic Title: Team Contact Office Hours:	Ziad Bataineh Professor Ziad.Bataineh@staff.hu.edu.jo Sunday (11 am-1 pm) Tuesday (11 am-1 pm) And all students are welcome at any time
<u>Physiology Lecturer</u> Name Academic Title	Zuheir Hasan Professor

Office location Email Address Team Contact Office Hours	3 rd floor, Room 3017 zuheirakh@hu.edu.jo Zuheirakh@staff.hu.edu.jo Sunday 10 -12 am Tuesday 10-12 am Or by appointment
<u>Pharmacology Lectures:</u> Name Academic Title: Office Location: Telephone Number: Email Address: Team Contact Office Hours	Sofian Al Shboul Assistant professor 3 rd floor, 3043 05390333 ext.5608 Sofian@hu.edu.jo Sofian@staff.hu.edu.jo Sunday 10-12 Tuesday 10-12 am Or by appointment
<u>Biochemistry Lecturers:</u> Name Academic Title: Office Location: Telephone Number: Email Address: Team Contact Office Hours	Walaal Bayoumi El Gazzaer Associate Professor 3rd floor, office No.3032 053903333 ext.5416 walaagazar@hu.edu.jo walaagazar@staff.hu.edu.jo Sunday and Thursday 10-1 pm
<u>Microbiology Lecturer:</u> Name Academic Title: Office Location: Telephone Number: Email Address: Team Contact Office Hours	Ashraf Khasawneh Associate Professor 3rd floor, office No.3013 053903333 ext. 5562 ashrafkh@hu.edu.jo ashrafkh@staff.hu.edu.jo Sunday 10-12 Tuesday 10-12 am Or by appointment
<u>Community Medicine Lecturer:</u> Name Academic Title: Office Location: Telephone Number: Email Address: Office Hours	Lara Al-Natour Full-time lecturer First floor, Room 1012 053903333 laram@hu.edu.jo laram@staff.hu.edu.jo Tuesday 10-12 Thursday: 10-11 Or by appointment

TOPICS DETAILS/ STUDENT LEARNING OUTCOMES MATRIX

Course objectives	Course student learning outcomes			Assessment method
A-Biomedical: 1. Describe structures of the respiratory organs (nose, pharynx, larynx, trachea, bronchi, and lung), as well as their development, their histology, and their blood supply. 2. Describe the mechanics of pulmonary ventilation and the major mechanisms involved in the regulation of respiration. 3. Explain how the respiratory gasses are exchanged and carried throughout the body. 4. Develop an understanding of the respiratory system	Topic (subjects& number of lectures/ subject)	Subject	Intended Learning Outcomes	Exams
	<u>Topic 1: Upper respiratory tract (4 lectures):</u> Anatomy: 2 Pathology: 1 Microbiology: 1	<u>Anatomy:</u> 1. Overview of Anatomy of the Respiratory System -Upper respiratory system (I): Nose and paranasal sinuses 2. Upper respiratory system (II): Larynx and pharynx	<ul style="list-style-type: none"> - Describe the general structures and organs of the respiratory system. - Describe the anatomical and functional subdivisions of the respiratory system. - Describe the structure of the external nose with its blood and nerve supply. - Describe the structure of the nasal cavity including the nasal septum. - Locate the openings of the paranasal sinuses and naso-lacrimal duct in the nasal meatuses. - Describe the nerve and blood supply of the nasal cavities, and its relation to epistaxis. - Discuss microscopic structure of nose - Describe the larynx (definition, extension, size, and construction). - Understand the Laryngeal ligaments and membranes - Discuss the laryngeal inlet and laryngeal cavity. - Describe the laryngeal muscles, actions, and nerve supply. - Enumerate the blood supply of the larynx. - Describe the pharynx (structure, boundaries, and parts). - Define Pharyngeal muscles (names, action, relations, and nerve supply). - Discuss the sensory innervation of the pharynx. - Describe the interior of the pharynx - Define Palatine tonsils (Anatomy and applied anatomy). - Describe the microscopic structure of the upper respiratory passage 	

<p>and hemoglobin roles in the acid base balance</p> <p>5. Identify and describe the major causes, pathogenesis, morphological changes, and complications of various disease processes that affect the respiratory tract.</p> <p>6. Identify various bacteria, viruses, parasites, and fungal infections, which infect the respiratory tract and to understand principles of diagnosis, treatment, and prevention.</p> <p>7. Identify the major risk factors which contribute to occupational diseases of the respiratory system and to understand their epidemiological pattern in the community.</p> <p>8. Understand the major pharmacological principles, which provide the basis for the treatment of infection including tuberculosis, cough, and bronchial asthma, as well as the</p>			<ul style="list-style-type: none"> - Discuss microscopic structure of larynx and pharynx 	
		<p><u>Pathology:</u></p> <p>1. Upper Respiratory Tract pathology</p>	<ul style="list-style-type: none"> - Discuss the clinical features, morphology and prognosis of nasal polyps, nasopharyngeal carcinoma and laryngeal lesions including vocal cord nodules, papilloma, and carcinoma. 	
		<p><u>Microbiology:</u></p> <p>1. Upper respiratory tract infections</p>	<ul style="list-style-type: none"> - Define the Upper respiratory tract infections. - Be familiar with the clinical picture of the different upper respiratory tract infections such as Rhinitis, Pharyngitis and tonsillitis, Stomatitis, Peritonsillar or retrotonsillar abscesses, Retropharyngeal or lateral pharyngeal abscesses. - Be familiar with the major infectious causes of the upper respiratory tract infections. - Be familiar with the primary diagnostic approaches in pharyngitis and tonsillitis. - Be familiar with the general principles of management 	
	<p><u>Topic 2:</u></p> <p><u>Breathing</u></p> <p>(15 lectures)</p> <p>Anatomy: 6</p> <p>Physiology: 3</p> <p>Pathology:2</p> <p>Pharmacology:4</p>	<p><u>Anatomy:</u></p> <p>1. Lower Respiratory System (I): Trachea and bronchi</p> <p>2. Lower Respiratory System (II): lung and pleura</p> <p>3. Thoracic cage, thoracic Wall, and intercostal muscles</p> <p>4. Mediastinum and Diaphragm</p> <p>5. Histology of the respiratory system</p> <p>6. Development of the Respiratory System</p>	<ul style="list-style-type: none"> - Describe trachea (beginning, ending and important relations). Identify Blood supply of trachea. - Study the lymphatic drainage of trachea - Study nerve supply of trachea - Compare between right and left main bronchus and its clinical importance. - Study segmental divisions of bronchi. - Describe bronchopulmonary segments. - Describe the microscopic structure of trachea and bronchi - Describe Lung (shape, surfaces, and borders). - Identify contents of the root of the right and left lung. - Discuss relations of the mediastinal surface of the lung. - Understand blood supply and nerve supply of the lung - Compare between right and left lung. - Define parts of the pleura, blood supply and nerve supply of pleura. - Define surface anatomy of the lung and pleura - Describe the typical appearance of chest X rays. - Study the microscopic structure of the main bronchi and their subdivisions. - Study the microscopic structure of the lung parenchyma and correlate this structure with gas exchange function 	

<p>pharmacology of anti-histamine drugs.</p> <p>9. Identify the Public health issues associated with COVID19.</p> <p>10-Correlate the basic biomedical knowledge to the clinical skills</p>			<ul style="list-style-type: none"> - Describe the shape and outline of thoracic cage - Describe the anatomical landmarks of the anterior chest wall. - List the various structure marking of thoracic wall - Describe muscles of thoracic wall including nerve, blood supply and actions. - Classify ribs, name their various parts - Define intercostal spaces and discuss their various components including intercostal muscles - Define mediastinum and its anatomical parts - Discuss contents of each part of mediastinum - Describe the diaphragm (origin, insertion, nerve supply and action). - Describe the major and minor opening of the diaphragm. - Describe the development of the nasal cavity. - Describe development of the pharynx and larynx. - Describe the development of the lungs and bronchi
---	--	--	--

<p>B-Critical thinking skills:</p> <p>1-Observe, identify, and predict health problems based on previous experience and make decisions based on evidence rather than opinion</p> <p>2- Draw conclusions about the collected data (inference).</p> <p>3- Maintain good communication habits, such as active listening and respect.</p> <p>4-Improve problem-solving skills.</p> <p>5-Demonstrate knowledge of resources and tools available to support lifelong learning</p>		<p><u>Physiology:</u></p> <p>1&2. Pulmonary mechanics</p> <p>3. Airway resistance</p>	<ul style="list-style-type: none"> - Review the physiological anatomy of the pulmonary system and define conducting and respiratory zones. - list the respiratory muscle and describe their function during tidal and forcefully breathing (Review) - List the major functions of the lungs. - Define cellular respiration and external respiration and understand the steps of external respiration. - Define the mechanical interaction of the lung and the chest wall. - Describe the generation of a pressure gradient between the atmospheres and the alveoli. - Define intrapleural pressure, alveolar pressure, transpulmonary pressure, and elastic recoil pressure - Identify the forces that generate the negative intrapleural pressure when the lung is at functional residual capacity, - Predict the direction that the lung and chest wall will move if the air is introduced into the pleural cavity (pneumothorax). - List the major muscles involved in respiration and state the role of each. - Define tidal breathing and describe the changes in alveolar pressure, transpulmonary and intrapleural during each respiratory cycle. - Describe how differences in pressure between the atmosphere and alveoli cause air to move in and out of the lungs during normal breathing. - Diagram how pleural pressure, alveolar pressure, airflow, and lung volume change during a normal quiet breathing cycle. Identify on the figure the onset of inspiration, cessation of inspiration, and cessation of expiration. - Define lung compliance and identify two common clinical conditions in which lung compliance is higher or lower than normal. - Describe and draw the pressure-volume of the lung (compliance) curves for the lungs. - Draw a normal pulmonary pressure-volume (compliance) curve (starting from residual volume to total lung capacity and back to residual volume), labeling the inflation and deflation limbs. - Define surface tension and describe how it applies to lung mechanics, including its effects on the alveolar size - Define atelectasis and explain the role of surfactant and alveolar interdependence in stabilizing the alveoli. - Predict changes in lung compliance in restrictive and obstructive lung diseases - Define surface tension and describe how it applies to lung mechanics, including the role of pulmonary surfactant and alveolar interdependence in the recoil and expansion of the lung and the role of surfactants in preventing atelectasis. - Define airway resistance and review the biophysical physical principles of airway resistance. - Define Laminar and turbulent Flow (Review) - Identify the chief site of airway resistance under normal conditions. - Describe the effects of changing lung volumes on resistance - Describe humeral and neural control of airways resistance - Describe the dynamic compression of airways during forced expiration and its physiological significance. 	
--	--	--	--	--

			<ul style="list-style-type: none">- List the factors that contribute to the work of breathing.- Predict alterations in the work of breathing in different physiologic and pathologic states.- Describe the dynamic pulmonary function tests and define FVC, FEV1 (FEF25–75) - Understand the flow volume curves volume and define (PEFR) and describe the changes in the flow volume curves of obstructive and restrictive pulmonary diseases.	
--	--	--	--	--

		<p><u>Pathology:</u> 1,2. Obstructive Lung diseases (I and II)</p>	<ul style="list-style-type: none">- Mention the general characteristics of obstructive lung diseases.- Define emphysema, and discuss the different types, etiology, pathogenesis, clinical and pathologic (gross & microscopic) features, effects, & complications of emphysema.- Discuss briefly the different conditions related to emphysema, including (1) compensatory, (2) obstructive, (3) bullous & (4) interstitial emphysema.- Define chronic bronchitis, describe the etiology, types, pathogenesis, pathologic feature, and clinical course of chronic bronchitis.- Define asthma, describe the etiology, types, pathogenesis, pathologic features, clinical course, and prognosis of asthma.- Define bronchiectasis, describe the etiology, pathogenesis, pathologic features, clinical course, and complications of bronchiectasis.	
		<p><u>Pharmacology</u> 1.Treatment of COPD 2,3. Treatment of bronchial asthma 1& 2 4.Treatment of cough and allergic rhinitis</p>	<ul style="list-style-type: none">- Review the pathophysiology of COPD and the risk factors.- Understand COPD therapeutic approach- Describe the mechanisms of action, pharmacokinetics, uses and side effects of agents can be used for COPD management- Describe the pathophysiology, etiology, and clinical presentations with special emphasis on factors known to provoke the attacks of bronchial asthma.- Understand the aims of therapy of bronchial asthma.- Be familiar with some examples of drugs that can be used in the treatment of bronchial asthma with their method of administration, mechanisms of action, pharmacokinetics, and side effects, such as Beta-agonists Corticosteroids, Anticholinergic agents, Theophylline, Mast – cell stabilizers, Anti-leukotrienes, and Others.- Understand the pathophysiology of cough.- Understand the sites of actions of antitussive given example- Understand the mechanism of action of mucolytic agents and give examples- Review histamine synthesis, storage, release, actions, and the clinical manifestations of histamine shock.- Understand the mechanisms of actions of antihistamine drugs.- Be able to classify, and understand the pharmacokinetics, uses, and adverse effects of antihistamine drugs	
	<p><u>Topic 3:</u> <u>Ventilation</u> <u>(12 lectures)</u> Physiology: 6</p>	<p><u>Physiology</u> 1.Pulmonary and alveolar ventilation 2.Pulmonary circulation 3.Pulmonary Gas Diffusion,</p>	<ul style="list-style-type: none">- Define and contrast the following terms: anatomic dead space, physiologic dead space, wasted (dead space) ventilation, total minute ventilation and alveolar minute ventilation.- Calculate alveolar ventilation and minute ventilation- Predict the effects of alterations of alveolar ventilation on alveolar carbon dioxide and oxygen levels.	

	<p>Biochemistry: 4</p> <p>Pathology:2</p>	<p>Gas diffusion across alveolar capillary membrane and diffusion capacity of the lung</p> <p>4. Ventilation/perfusion relationship</p> <p>5. Transport of O₂ and CO₂ by the blood</p> <p>6.. Control of ventilation</p>	<ul style="list-style-type: none">- Define and contrast the relationships between alveolar ventilation and the arterial PCO₂ and PO- Understand Fowler’s method of measuring the anatomic dead space-Calculate the volume of dead space in a lung using the Bohr equation-Describe and explain the regional differences in alveolar ventilation in the normal lung.-Contrast the systemic and pulmonary circulations with respect to pressures, resistance to blood flow, and response to hypoxia.-Describe how pulmonary vascular resistance changes with alterations in cardiac output or pulmonary arterial pressure. Explain in terms of distention and recruitment of pulmonary vessels.-Identify the neural and humoral factors that influence pulmonary vascular resistance and pulmonary blood flow-Describe how pulmonary vascular resistance changes with lung volume. Explain in terms of alterations in alveolar and extra-alveolar blood vessels.-Describe the consequence of hypoxic pulmonary vasoconstriction on the distribution of pulmonary blood flow.-Explain development of pulmonary edema by a) increased hydrostatic pressure, b) increased permeability, c) impaired lymphatic outflow or increased central venous pressure,-Describe the major functions of the bronchial circulation.-Review Dalton’s law Henry’s law and understand their application to partial pressure of gasses in airways and blood.-Review the chemical principles of gasses partial pressure and define the concept of gas partial pressure.-Identify the values of PO₂ & PCO₂ in inspired air, alveolar air, and expired air.-Identify the PO₂ and PCO₂ of arterial and venous blood.-Define diffusion, and state Fick’s law for diffusion.-Describe the anatomical features of the alveolar capillary membrane. (Review)-Discuss and describe the diffusion of O₂ and CO₂ through the alveolar capillary membrane and list the factors affecting the rate of gas diffusion-Distinguish between perfusion limitation and diffusion limitation of gas transfer in the lung.-Define oxygen diffusing capacity and describe the rationale and technique for the use of carbon monoxide to determine diffusing capacity.-List main causes leading to decreased diffusion capacity of the lung-Define Alveolar O₂, Arterial PO₂ gradient (A-a gradient)-Be able to calculate the alveolar to arterial PO₂ difference, (A-a).-Describe the normal value for (A-a) and the significance of an elevated (A-a) O₂.-List some pathophysiological conditions which cause an increase in A-a gradients.-Define hypoxemia, hypoxia and list different types and causes of hypoxia.-Describe and explain the regional difference of alveolar ventilation	
--	---	--	--	--

			<ul style="list-style-type: none"> -Describe the regional differences in pulmonary blood flow in an upright person. Define zones I, II, and III in the lung, with respect to pulmonary vascular pressure and alveolar pressure -Explain the regional difference of pulmonary blood flow and the effect of gravity on pulmonary blood flow. -Describe the interrelationships of alveolar pressure, pulmonary arterial pressure, and pulmonary venous pressure and their effects on the regional distribution of blood flow. -Describe how the ventilation/perfusion (V/Q) ratio of an alveolar-capillary lung unit determines the PO₂ and PCO₂ of the blood emerging from that lung unit. -Identify the average V/Q ratio in a normal lung and explain how V/Q is affected by the vertical distribution of ventilation and perfusion in the healthy lung -Describe the normal relative differences from the apex to the base of the lung in alveolar and arterial PO₂, PCO₂, pH, and oxygen and carbon dioxide exchange. -Predict how the presence of abnormally low and high V/Q ratios in a person's lungs will affect arterial PO₂ and CO₂. -Define right-to-left shunts, anatomic and physiological shunts, and physiologic dead space (wasted ventilation).. -Describe the airway and vascular control mechanisms that help maintain a normal ventilation/perfusion ratio. -Name two compensatory reflexes for V/Q inequality -Describe two causes of abnormal V/Q distribution. -State the relationship between the partial pressure of oxygen in the blood and the amount of oxygen physically dissolved in the blood -Define oxygen partial pressure (tension), oxygen content, and percent hemoglobin saturation as they pertain to blood. -Describe and draw an oxyhemoglobin dissociation curve (hemoglobin oxygen equilibrium curve) showing the relationships between oxygen partial pressure, hemoglobin saturation, and blood oxygen content. -On the same axes, draw the relationship between PO₂ and dissolved plasma O₂ content (Henry's Law). Compare the relative amounts of O₂ carried bound to hemoglobin with that carried in the dissolved form. -Describe how the shape of the oxyhemoglobin dissociation curve influences the uptake and delivery of oxygen. -Define P₅₀. -Show how the oxyhemoglobin dissociation curve is affected by changes in blood temperature, pH, PCO₂, and 2,3-DPG, and describe a situation where such changes have important physiological consequences. -Describe how anemia and carbon monoxide poisoning affect the shape of the oxyhemoglobin dissociation curve, PaO₂, and SaO₂. -List the forms in which carbon dioxide is carried in the blood. Identify the percentage of total CO₂ transported as each form. -Describe the importance of the chloride shift in the transport of CO₂ by the blood. -Identify the enzyme that is essential to normal carbon dioxide transport by the blood and its location. -Draw the carbon dioxide dissociation curves for oxy- and deoxyhemoglobin. 	
--	--	--	--	--

			<ul style="list-style-type: none">-Describe the interplay between CO2 and O2 binding on hemoglobin that causes the Haldane effect.-Describe the general organization of the respiratory control system.-Identify the regions in the central nervous system that play important roles in the generation and control of cyclic breathing.-Describe the central and peripheral chemoreceptors and their role in the control of ventilation-List the anatomical locations of chemoreceptors sensitive to changes in arterial PO2, PCO2, and pH that participate in the control of ventilation.-Describe the effects of alterations in body oxygen, carbon dioxide, and hydrogen ion levels on the control of breathing and understand the integrated responses to CO2, hypoxia, pH and identify the relative importance of each in sensing alterations in blood gasses-List the cardiopulmonary and other reflexes that influence the breathing pattern.-State the ability of the brain cortex to override the normal pattern of inspiration and expiration temporarily.	
		<p><u>Biochemistry</u></p> <p>1.RDS, α1-Antitrypsin deficiency and cystic fibrosis</p> <p>2.Arterial Blood Gases (ABG)</p> <p>3.Acids-base balance & the respiratory system</p> <p>4.Role of hemoglobin in acid base balance</p>	<ul style="list-style-type: none">- Describe the synthesis and biochemical role of surfactant- Describe the clinical significance and the biochemical basis underlying insufficient surfactant production, α1-Antitrypsin deficiency and cystic fibrosis- Interpret the normal values of Arterial Blood Gases (ABGs)- Interpret the ABGs in various clinical disorders- Discuss the ABGs in compensated Acid base Disorders- List the PH fighters and types of buffers- Explain the role of respiration in pH regulation- Describe respiratory acidosis and respiratory alkalosis- Explain the mechanism of pH regulations in respiratory disturbances- Explain the role of hemoglobin in the delivery of oxygen, removal of waste and buffering- Describe the allosteric effects of H⁺, 2,3-BPG and CO2 on the ability of Hb to reversibly bind oxygen. Explain how these effects enable appropriate oxygen delivery to tissues, buffering of the blood, and CO2 removal.	
		<p><u>Pathology</u></p> <p>1. Chronic interstitial (Restrictive) lung diseases I, Atelectasis and Acute Respiratory Distress Syndrome (ARDS)</p> <p>2. Chronic interstitial (Restrictive) lung diseases II and pulmonary diseases of vascular origin</p>	<ul style="list-style-type: none">- Describe the structure of the normal alveolar wall.- Define atelectasis and discuss its different types, morphology, and outcomes.- Define acute respiratory distress syndrome (ARDS) and list the different etiologic disorders associated with its development.- Discuss the pathogenesis, gross & microscopic features, & the clinical course of ARDS.- Comment briefly on neonatal respiratory distress syndrome (NRDS)- Define restrictive lung diseases.- Mention the general characteristics of chronic restrictive interstitial lung diseases.- Discuss in detail idiopathic pulmonary fibrosis including pathogenesis, morphology (gross & microscopic) and clinical course.	

			<ul style="list-style-type: none">- Briefly talk about other patterns of fibrosing interstitial lung diseases including 1. Nonspecific interstitial pneumonia, 2. Cryptogenic organizing pneumonia, 3. collagen vascular diseases associated lung diseases and 4. drug and radiation related diseases.- Discuss in detail pneumoconiosis, including pathogenesis, gross & microscopic features, effects & complications of (1) coal workers' pneumoconiosis, (2) silicosis, & (3) asbestosis- Discuss in detail sarcoidosis, including epidemiology, pathogenesis, clinical features, morphologic features, and clinical course.- Define hypersensitivity pneumonitis and describe the pathogenesis, morphology, and clinical features.- Discuss smoking related interstitial lung diseases including DIP and RBILD.- Describe the definition, causes, pathogenesis, morphology, and clinical features of pulmonary hypertension.- Briefly discuss diffuse alveolar hemorrhage syndromes including Good pasture syndrome and granulomatosis and polyangiitis.	
	<p><u>Topic 4:</u> <u>Infections (12 lectures)</u></p> <p>Microbiology: 7 Pathology:2 Pharmacology: 3</p>	<p><u>Microbiology</u></p> <p>1.Streptococcus pneumoniae and other Spp. 2.Corynebacterium diphtheriae, Bacillus anthracis, Bordetella pertussis & Haemophilus influenzae. 3.Pseudomonas Mycoplasma and Legionella 4.Orthomyxoviridae: Influenza viruses A and B 5.Paramyxoviridae: Parainfluenza virus Orthopneumovirus: RSV Adenoviridae: Adenovirus Picornaviridae: Rhinovirus 6. Coronaviridae: Coronavirus 7.Fungal infections and Paragonimus westermani and</p>	<ul style="list-style-type: none">- Define the Middle and lower respiratory tract infections. Be familiar with the clinical picture of the different middle respiratory tract infections such as Epiglottitis, Laryngitis, laryngotracheitis, Bronchitis, Tracheobronchitis, and Chronic bronchitis.- Be familiar with the clinical picture of the different lower respiratory tract infections such as Acute pneumonia (Bronchopneumonia, and Lobar pneumonia), Chronic Pneumonia and Lung abscess.- Be familiar with the major infectious causes of the middle and lower respiratory tract infections.- Be familiar with the primary diagnostic approaches.- Be familiar with the general principles of treatment and prevention.- Describe morphology, and cultural characteristics of this group.- Be familiar with the virulence, pneumococcal capsule, toxins, extracellular enzymes, antimicrobial susceptibility, and diseases.- Be familiar with the laboratory diagnosis.- Be familiar with the general principles of treatment and prevention.- Describe the morphology and structure of C. diphtheriae, B. anthracis, B. pertussis & Haemophilus influenzae.- Describe their growth, pathogenesis, and virulence factors.- Explain immunity, transmission, and epidemiology.- Be familiar with different types of their infections.- Be familiar with the laboratory diagnosis.- Be familiar with the general principles of treatment and prevention.- Describe morphology and structure of the group.- Describe their growth, classification, toxins and extracellular products.	

		<p>Mycobacterium tuberculosis</p>	<ul style="list-style-type: none">- Explain their pathogenesis, immunity, and clinical manifestations.- Explain their mode of transmission and epidemiology.- Be familiar with related laboratory diagnosis.- Be familiar with their treatment and prevention.- Identify the viruses associated with upper respiratory tract, and the significance in relationship to antibiotics abuse.- Know the structure of the influenza virus and relate this into its evasiveness and virulence.- Explain the epidemiology in birds, animals, and humans, why it causes pandemics, methodology used for naming.- Explain the genetics, clinical presentation, pathogenesis, and the role of the immune response, reye's syndrome and significance.- Be familiar with the laboratory diagnosis.- Be familiar with antiviral drugs used and their mechanism of action.- Describe the significance of vaccination, the target groups that should be vaccinated, frequency, and side effects.- Describe the structure of parainfluenza virus, RSV, adenovirus, and rhinovirus and their replication strategies.- Explain the epidemiology, pathogenesis, and clinical presentation of these upper respiratory tract viruses.- Describe the immune system response and role in future protection.- Be familiar with the laboratory diagnosis.- Be familiar with treatment modalities and preventive measures.- Describe the structure of the coronaviruses and their replication strategy.- Describe the four major antigenic groups of the coronaviruses and explain their genetic variation and evolution.- Explain mode of transmission, infectivity, and pathogenesis.- Be familiar with the laboratory diagnosis.- Be familiar with treatment protocol, preventive measures, and prognosis- Describe the different fungi involved in the respiratory tract.- Describe their structure, clinical classification, and their significance in the disease process.- Explain the epidemiology, pathogenesis, clinical presentation, association with the immune status of patients.- Know the laboratory diagnosis in medical mycology.- Be familiar with the treatment and the antifungal drugs, their mechanism of action and toxicity.- Know the preventive measures and the role of the immune system.- Describe the morphology and life cycle of the organism.- Describe the epidemiology and clinical manifestations.- Be familiar with the related laboratory diagnosis.- Be familiar with treatment and prevention- Describe the morphology, structure, staining and cultural characteristics of the organism.	
--	--	-----------------------------------	---	--

			<ul style="list-style-type: none">- Relate the structure to the virulence and pathogenesis of the disease.- Explain the range of pathogenicity, resistance, antigenic structure, virulence mechanisms and antimicrobial susceptibility.- Be familiar with tuberculosis, routes of infections and reactivation.- Explain the immunity, transmission, and epidemiology.- Describe relevant laboratory diagnosis.- Be familiar with anti-tuberculosis drugs, and the multidrug resistance organism- Be familiar with the vaccines used and their strategy.- Know the role of the PPD testing and their significance.	
		<u>Pathology</u> 1.Pulmonary Infections I 2.Pulmonary Infections II	<ul style="list-style-type: none">- Define pneumonia.- Talk briefly about the different lung defense mechanisms against infection.- Mention the classification of various pneumonia syndromes.- Describe in detail the community acquired acute bacterial pneumonia including the different etiologic organisms (mainly streptococcus pneumonia), pathogenesis, morphology, clinical features, and complications.- Discuss community acquired atypical pneumonia including pathogenesis, morphology, and clinical features.- Talk more in detail about SARS-COV.- Discuss hospital-acquired pneumonia and aspiration pneumonia.- Discuss lung abscess and describe the mechanisms for microorganism introduction, pathologic features, clinical course & complications.- Talk about chronic pneumonia.- Discuss Tuberculosis in detail, including etiology, pathogenesis, epidemiology, types, gross and microscopic features, and complications.- Comment briefly on the morphology of Histoplasmosis, Blastomycosis, and Coccidioidomycosis.- Discuss pneumonia in immunocompromised patients and be familiar with the morphologic features of CMV, PJP, cryptococcosis, candidiasis, and opportunistic molds.	
		<u>Pharmacology</u> 1,2. Treatment of bacterial respiratory infections 3.Treatment of tuberculosis	<ul style="list-style-type: none">- Understand the pharmacokinetics, mechanism of action and adverse effects of drugs commonly used in the treatment of pulmonary bacterial infections.- Understand the concepts of TB treatment with special emphasis on two phases of therapy.- Understand the concepts of combination therapy particularly the advantages and disadvantages with special emphasis on TB management.- Describe the mechanisms of action, pharmacokinetics, uses and side effects of Isoniazid, Rifampin, and Ethambutol. In addition, pyrazinamide as first line therapy of tuberculosis.	

	<u>Topic 5:</u> <u>Malignancy (2</u> <u>Lectures)</u> Pathology: 2	<u>Pathology</u> 1.Lung Tumors I 2.Lung tumors II, Pleural Pathology	<ul style="list-style-type: none">- Discuss the general facts about lung tumors indicating its clinical impacts.- Discuss the changes in the classification of malignant epithelial lung tumors.- Describe the etiology, pathogenesis, morphology, clinical features, routes of spread and prognosis of lung carcinoma and their precursors.- Mention the diagnostic techniques of lung tumors.- Briefly comment on the role of immunohistochemistry in the diagnosis of lung carcinoma.- Talk in detail about the local and secondary effects of lung carcinoma, including paraneoplastic syndromes.- Describe the patterns of metastatic lung tumors.- Describe the classification of neuroendocrine tumors.- Discuss the morphology and clinical features of carcinoid tumors.- Briefly describe the clinical and morphologic features of pulmonary hamartoma.- Mention the different types of pleural effusion and pleuritis.- Describe pneumothorax, hemothorax and chylothorax. Discuss the etiology, pathogenesis, morphology, clinical presentation, and prognosis of malignant mesothelioma.	
	<u>Topic 6:</u> <u>Environmental</u> <u>issues</u> <u>(2 lectures)</u> Community Medicine: 2	<u>Community</u> <u>Medicine</u> 1. Occupational lung diseases 2. Occupational lung diseases	<ul style="list-style-type: none">- Students should be informed on the most prevalent Occupational Lung Diseases and how to prevent and control them.- Students should be taught the descriptive epidemiology of each form of occupational lung disease.	
	<u>Topic 7:</u> <u>Clinical</u> <u>Lectures (3</u> <u>lectures)</u> Pediatrics: 1 Radiology: 1 Surgery: 1	1. Approach to respiratory infections in children 2. Radiological modalities in the respiratory system 3. Surgical procedures and approaches in respiratory diseases	<ul style="list-style-type: none">- Be familiar with the general approach to infections in children- To be able to read a simple chest x-ray- To be able to diagnose emergency cases- Describe the surgical procedures used commonly in respiratory diseases- Surgical approach to respiratory diseases	

	Practical Sessions	<u>Anatomy Labs (2):</u> 1. Anatomy of the Upper respiratory tract And lower respiratory tract 2. Histology of the Respiratory Tract	<ul style="list-style-type: none"> - Identify the different parts of the external nose, nasal cavity, nasal septum, and nasal walls including conchae and meatuses with their associated openings. - Identify the different parts of the laryngeal skeleton, ligaments and membranes, including the vocal and vestibular folds. - Identify the different parts of the laryngeal cavity and the rima glottidis. - Identify the muscles of the larynx. - Revise surface markings of the larynx and site for emergency tracheostomy. - Identify different parts of the pharynx and the associated structures including the tonsils and comment on their clinical significance - Revise the gross, surface, and radiological anatomy of the trachea. - Identify the different parts of pleura and their recesses. - Identify the different parts of the lung and contrast between right and left lung. - Identify structures entering and leaving the hilum of the lung. - Identify important structural relations of the structures that leave impressions on the right and left lung. - Identify different parts of the bronchial tree. - Identify the radiological appearance of the lungs, trachea, and bronchial tree. - Identify the microscopic structure of the nasal mucosa, larynx, trachea, bronchial tree, and lung 	
		<u>Physiology Lab (1):</u> 1. Pulmonary functions tests Spirometry	<ul style="list-style-type: none"> - Discuss the purpose of performing PFT - Define spirometry and spirogram. - Demonstrate the recording of static lung volumes & identify different lung volumes and capacities measured by spirometer - Draw a normal spirogram, labeling the four lung volumes and four capacities. - Identify which volume and capacities cannot be measured by spirometry. - Indicate the normal values for lung volumes & capacities and describe the effect of age, gender, body height and race on lung volumes - Define the dynamic pulmonary function tests and define FVC, FEV1 and (FEF25–75). - Perform spirometry to determine FVC and FEV1 - Interpret changes in FVC and FEV1 and indicate their value in the diagnosis of obstructive and restrictive lung diseases. - Demonstrate the recording of peak expiratory flow and determine the following from the flow volume curve: PEFr, FEF25% - 75% - Explain how volume flow curves can be used to differentiate obstructive from restrictive respiratory dysfunction. - 	

		<u>Pathology Labs</u> <u>(2):</u> 1,2. respiratory diseases	- Describe the morphological features, including the gross and microscopic ones, for the most common and important pathological lesions of the different components of the respiratory system	
		<u>Microbiology Labs</u> <u>(1)</u> 1.Throat swab 2.Sputum culture	<ul style="list-style-type: none">- Be familiar with the selection, collection, and transport of specimens for microbiological examination.- Be familiar with the cultivation and isolation of viable pathogens.- List types of media used for throat swab culture.- Identify and describe the type of hemolysis.- Explain the value of using of some biochemical reactions- Be familiar with the selection, collection, and transportation of sputum samples.- Be familiar with the cultivation of acid-fast and nonacid-fast bacteria.- Be familiar with the procedure of Ziehl-Neelsen stain.- Be able to visualize and observe mycobacterium under the microscope.- Be familiar with the Lowenstein-Jensen medium.- Prepare slides from the sputum for staining.	

ACADEMIC SUPPORT

It is The Hashemite University policy to provide educational opportunities that ensure fair, appropriate, and reasonable accommodation to students who have disabilities that may affect their ability to participate in course activities or meet course requirements. Students with disabilities are encouraged to contact their instructor to ensure that their individual needs are met. The University through its Special Need section will exert all efforts to accommodate for individual's needs.

Special Needs Section: Student Services and Care Unit

Tel: 053903333 ext. 4132/ 4583/ 5023

Location: Deanship of Students Affairs

Email: stydent@hu.edu.jo

COURSE REGULATIONS

Participation

Class participation and attendance are important elements of every student's learning experience at The Hashemite University, and the student is expected to attend all classes. If a student is absent **for more than 15%** of the course sessions, then he/she may be liable to fail the course regardless of their performance. It is the students' responsibility to monitor the frequency of their own absences. Attendance record begins on the first day of the course irrespective of the period allotted to drop/add and late registration. It is a student's responsibility to sign in; failure to do so will result in a non-attendance being recorded.

In exceptional cases, the student, with the instructor's prior permission, could be exempted from attending a class provided that the number of such occasions does not exceed the limit allowed by the University.

Plagiarism

Plagiarism is considered a serious academic offence and can result in your work losing marks or being failed. HU expects its students to adopt and abide by the highest standards of conduct in their interaction with their professors, peers, and the wider University community. As such, a student is expected not to engage in behaviors that compromise his/her own integrity as well as that of the Hashemite University.

- ❖ **Plagiarism includes the following examples, and it applies to all student assignments or submitted work:**
 - Use of the work, ideas, images, or words of someone else without his/her permission or reference to them.
 - Use of someone else's wording, name, phrase, sentence, paragraph, or essay without using quotation marks.
 - Misrepresentation of the sources that were used.
- ❖ **The instructor has the right to fail the coursework or deduct marks where plagiarism is detected**

Missed exams:

In all cases of assessment, students who fail to attend an exam on the scheduled date without prior permission and/or are unable to provide an accepted medical note will automatically receive a failing grade for this part of the assessment.

Cheating:

Students who are caught cheating will be reported to the Medical Dean, and further action will be taken as necessary, according to the University Regulations.

Student Complaints Policy

Students at The Hashemite University have the right to pursue complaints related to faculty, staff, and other students. The nature of the complaints may be either academic or non-academic. For more information about the policy and processes related to this policy, you may refer to the students' handbook.

COURSE ASSESSMENT

Course Calendar and Assessment

Students will be graded through the following means of assessment and their final grade will be calculated from the forms of assessment as listed below with their grade weighting considered.

Assessment	Grade Weighting	Material	Deadline Assessment
Exam 1 (Midterm exam)	40%	TBD	TBD
Exam 2 (Practical)	20%	Practical Labs	TBD
Final exam	40%	Inclusive	TBD

Description of Exams

Test questions will predominantly come from the material presented in the lectures. The exam will consist of multiple-choice questions for the regular exams and short essay questions for makeup exams (for students with accepted excuses, only documented absences will be considered as per HU guidelines).

Quizzes: Unannounced quizzes may be given during or/and at the end of each topic based upon the previous lectures. It will enforce that you come prepared to the class.

❖ Grades of the MD program are not negotiable and are awarded according to the following criteria

Letter Grade	Description	Grade Points
A+	Excellent	4.00
A		3.75
A-		3.50
B+	Very Good	3.25
B		3.00
B-		2.75
C+	Good	2.50
C		2.25
C-		2.00
D+	Pass	1.75
D	Pass	1.50
F	Fail	0.00
I	Incomplete	-

WEEKLY LECTURE SCHEDULE AND CONTENT DISTRIBUTION

Subject	Number of Lectures	Number of Labs	Lecturers
Anatomy	8	2	Dr. Mohamed Fathi, Dr. Ziad Bataineh
Physiology	9	1	Dr. Zuheir Hasan
Biochemistry	4	-	Dr. Walaa Bayoumi
Pathology	9	2	Dr. Ola Abu Al Karsaneh
Microbiology	8	1	Dr. Ashraf Khasawneh
Pharmacology	7	-	Dr. Sofian Al Shboul
Community Medicine	2	-	Dr. Lara Al Natour
Clinical lectures	3	-	Dr. Mohammad AL Hourani, Dr. Jehad Fataftah, Dr. Muna Al Kelani
Clinical Skills	-	2	Dr. Ayman Al Sharo
Total	50	8	

A detailed lectures timetable is provided separately.
