Course Description	<p>The course enables you to understand the basic principles of programming. The language used for the course is Java, chosen because it supports object oriented programming and because it is becoming widely used in industry.</p> <p>The course will include discussions and explanations of the following topics: introduction to programming; writing, compiling, and running simple programs; expressions, variables, and assignments; control structures; objects and classes, methods, and arrays.</p>
---------------------------	---

a) Textbook(s):
1. Liang, Y. Daniel (2010) Introduction to Java Programming Comprehensive Version, Eighth Edition. The course covers the material in the first nine chapters of the book; the remaining chapters will be covered in Object Oriented (2).
b) Additional References:
1. www.java.sun.com
2. Deitel&Deitel, Java: How to Program, 9 th edition , Prentice Hall, 2011.

Course Learning and Outcomes CLOs
1. Distinguish computer's basic concepts, computer programs, history of the Java programming language. (i)

2. In depth understanding syntax and semantics of Java and demonstrate knowledge of Java language specification, API, JDK, and IDE. (i)
3. Be able to apply control structure (selection and loops) in designing Java applications. (c)
4. Demonstrate the ability to use methods in Java program flow. (c)
5. Be able to apply arrays and Strings in designing Java applications. (c)
6. Be able to apply Object-oriented concepts in designing Java applications. (c)
7. Develop complete Java programs using various Java programming language constructs. (c)
