

## Syllabus

### Environmental and Natural Resources Economics

Eco/1802011327

Prior Requisite: Eco/ 1802011211

2019

**The Hashemite University**

**Department of Economics**

**Instructor: Dr. Yahya Al Mola**

**Instructor Office: Economic Building 337**

**E-mail: [yahyayz@hu.edu.jo](mailto:yahyayz@hu.edu.jo)**

### Teaching program

General Introduction

1. Economic efficiency and environmental protection
2. The benefits and costs of environmental protection
3. The efficiency of markets
4. Market failure in the environmental realm
5. Managing stocks: natural resources as capital assets
6. Stocks that grow: the economics of renewable resource management
7. Principles of market-based environmental policy
8. The case for market-based instruments in the real world
9. Sustainability and economic growth

### Course description

This course aims to introduce students to how economists view problems concerning natural resources and the environment.

### Learning outcomes

On completing this course, students will have gained

1. Assess and describe the economic aspects of natural resources and environmental issues.
2. Apply analytical economic tools to describe the extent to which these issues constitute economic problems
3. Identify, evaluate in depth, and propose and advocate for solutions to such problems.

### Textbook

Keohane, N and Olmstead, *SMarkets and the Environment*(2016)

Second edition

### Other readings

Tietenberg, T *Environmental and Natural Resources Economics* (2003)

Sixth edition

**Grading**

Grades will be based on the following components and weights

Midterm 1	20
Midterm 2	20
project	20
Final	40

Note: Students are required to present a proposal of the project they wish to do in the second week of the term. Topics of the projects will be discussing in office hours.
